

ALWAYS PURCHASE
BLUE TAG CERTIFIED TURFGRASS.

The blue tag that accompanies each order is your proof that the sod you purchased has been grown in accordance with established certification standards designed to promote ongoing varietal purity and uniformity. This assures you that the T-10 you purchase will be the same today and tomorrow. Be sure to demand certified turfgrass for your lawn.

T10

Certified Bermudagrass

The Rapid Recovery Bermudagrass

Ideal turfgrass for high traffic athletic fields, golf courses, recreation areas and active home lawns.

- ▶ *Requires Half the Mowing of Traditional Bermuda Grass*
- ▶ *Excellent Cold Hardiness*
- ▶ *Excellent Recovery from Traffic & Drought*
- ▶ *Requires Less Nitrogen*

T-10 is a low maintenance bermudagrass with a deep blue-green color. It has a medium width leaf blade, allowing it to be easily maintained — even with a rotary mower. If you have a high traffic athletic field, park, or an active home lawn and want to reduce maintenance time and cost, get certified T-10 sod, park the mower and enjoy.

LANDSCAPING

This is the best bermudagrass for most landscape applications. T-10 is a low maintenance bermudagrass with a deep blue-green color. It has excellent cold hardiness, can be mowed with a rotary mower and reduces mowing frequency by up to 50 percent compared to other bermudagrass. It can be overseeded in the fall, for year round green color.

GOLF

T-10 is an excellent low maintenance choice for golf courses. It has a medium width leaf blade and has excellent lateral spread for quick recovery from foot and cart traffic. T-10's unique blue-green color provides an excellent contrast to TifSport or Tifway (T-419). It is ideally suited for driving ranges, roughs, and fairways especially in the northern transition zone and higher elevations.

ATHLETIC FIELDS

T-10 is the best choice for low maintenance athletic fields. It provides a tough, durable playing surface that recovers quickly from traffic. T-10 can be mowed with a rotary mower and requires less maintenance than other hybrids like TifSport or Tifway (T-419). It is the ideal playing surface for high school or parks & recreation sports fields.
